

Accessing CONNECTIONS via URL/HTML

To access CONNECTIONS via URL – either from your PC or through a VDI desktop – you can follow the below steps. Make sure you are using a **Google Chrome** browser for full CONNECTIONS functionality.

1. In a **CHROME** browser, type: <https://remote.ny.gov>
2. You will be directed to the below– select **VMware Horizon HTML Access**

3. In the subsequent VMware Horizon window – if you are accessing **off** of the state network, you will see the below prompt to enter your RSA username and passcode and Login. (If you are accessing from on the state network, you may not see this RSA prompt here, and should continue to the next step).

VMware Horizon

RSA Enter your RSA SecurID user name and passcode

Username

Passcode

Login

Cancel

**Note – the windows in steps 3 and 4 look very similar for both RSA and SVC authentication – if the prompt in the window specifically refers to your RSA code or asks for your passcode, this is your cue to use your RSA token rather than your SVC ID.*

- Once your RSA passcode is authenticated, or if you are already on the state network and skipped the above step, you should see the below VMware Horizon window, prompting you for your SVC ID and password. Enter these credentials and click "Login."

VMware Horizon

xs7767

.....

SVC

Login

Cancel

5. You'll be immediately presented w/ the CONNECTIONS environments to which your profile has access. To open CONNECTIONS production, click "OCFS PROD CONNECTIONS."
